TWIN RISE

KETCHUM HALL

ROCKWELL HALL

DiDonato Associates was selected to provide design and construction administration services for the exterior rehabilitation of various buildings at Buffalo State College.

The exterior building shells of several buildings on the Buffalo State campus are in need of repair/replacement. The masonry/ exterior is in poor condition in areas on the facades of these buildings. The existing poor condition of various building windows also needs to be addressed. Remediation of these poor conditions is necessary to maintain a water-tight exterior and improve energy efficiency and operational use.

The scope of work will include the testing/review/analysis of the existing exterior wall conditions at Rockwell Hall, Ketchum Hall, Theatre Arts, Bacon Hall, Upton Hall, Southwing, and Twin Rise buildings and work to remediate poor conditions. Replacement and repair of exterior masonry and window replacement are the primary components of this work.
